Programme Title: MSci Computer Science

Programme Specification

Awarding Body/Institution: Queen Mary, University of London
Teaching Institution: Queen Mary, University of London
Name of Final Award and Programme Title: Master of Science (MSci) Computer Science
Name of Interim Award(s): Master of Science (MSci)
Duration of Study / Period of Registration: Four years full time
QM Programme Code / UCAS Code(s): G401
QAA Benchmark Group: Computer Science
FHEQ Level of Award: Level 7
Programme Accredited by: British Computer Society and IET
Date Programme Specification Approved: N/A
Responsible School / Institute: School of Electronic Engineering & Computer Science

Schools which will also be involved in teaching part of the programme: N/A

Institution(s) other than Queen Mary that will provide some teaching for the programme: N/A

Programme Outline

This broad degree programme provides a solid foundation for a number of IT careers, including programming and systems analysis and design. You will cover core topics such as software engineering, computer systems and applications. You can specialize in subjects such as computer graphics, artificial intelligence and distributed systems. You will gain practical experience in building a variety of computer systems in progressively more demanding contexts.

The MSci follows the same structure as the BSc, with the inclusion of a team project in the third year. It incorporates an additional year of specialization in such topics as computer vision, human-computer interaction, and the semantic web. You can transfer onto the MSci from the BSc until the end of the second year, subject to satisfactory performance.

Aims of the Programme

The overall aims of this programme are to produce graduates with a sound understanding of the discipline of computer science, good software engineering knowledge and skills and a range of advanced skills and knowledge in selected advanced areas.

The programme has three main themes: software engineering, computer systems and applications. The aim is to provide a good coverage of the foundations of these areas along with the opportunity for students to develop a deeper knowledge of the topics.
that particularly interest them.

The programme has a strong practical character and students gain experience in building a variety of computer systems in a range of progressively demanding situations.

Alongside this the programme pays attention to the wider context of computing and the development of transferable skills such as writing, presentation and team work. The programme is under continual revision to ensure it matches the needs of both students and their future employers.

**What Will You Be Expected to Achieve?**

The programme provides opportunities for students to develop and demonstrate knowledge, understanding and skills in the following areas. The outcomes are informed by the QAA subject benchmark statement in Computing, the requirements of the BCS and IEE for CEng accreditation and the ACM Computing Curricula 2001.

**Software Engineering**
- knowledge of the basic theory of programming languages and of the main classes of languages
- experience in using several programming languages
- appreciate the importance of simplicity, robustness and systematic organization in program design
- knowledge of fundamental algorithms and the notion of complexity
- experience in applying a range of methods in the development of large-scale software systems
- knowledge of the software life-cycle, software design methodologies and software development tools
- understanding of database principles and techniques and they role they play in information management

**Computer Systems**
- knowledge of computer system components and architecture
- understanding of the principles of operating systems and networks and the techniques required for their implementation
- knowledge of specific operating systems including experience in implementing parts of an operating system
- knowledge of the common protocols used in networks

**Applications**
- knowledge and understanding of some major application areas in the sciences, medicine, industry and commerce
- knowledge of some advanced application techniques and experience with using them in practice
- knowledge of usability principles and the ability to apply them in practice

**Generic Knowledge and Transferable Skills**
- experience in problem-solving
- work effectively as a member of a design team
- knowledge of project management skills
- appreciate the presence of risk in engineering practice
- produce well-written technical reports
- understanding of the mathematical, scientific and engineering elements of computer science
- understanding of the historical, social and professional context of computer science

Programme Title: MSci Computer Science

A3 Knowledge and skills related to the key field of applications, including understanding of some of the major application areas in the sciences, medicine, industry and commerce, and the ability to grasp and apply appropriate usability principles and techniques for these areas.

Disciplinary Skills - able to:

B1 Analyse and solve technical problems effectively, both individually and as part of a design team
B2 Understand and apply technical project management techniques and skills
B3 Demonstrate awareness and understanding of the mathematical, scientific and engineering foundations of the discipline of computer science
B4 Demonstrate awareness and understanding of the historical, social, professional, industrial and ethical context of the discipline of computer science
B5 Communicate technical detail effectively to a variety of audiences, both through production of well-written technical reports and through oral presentation / demonstration
B6 Work with a high degree of independence to define a problem area; perform appropriate research; understand and work within the broader context including client / user needs, constraints and resources; manage the project effectively and efficiently; justify and evaluate the outcomes

Attributes:

C1 Connect information and ideas within the broader context of the discipline of computer science
C2 Acquire and apply knowledge in a critical way, evaluating its reliability and relevance, in order to investigate and solve unfamiliar problems
C3 Explain complex technical concepts clearly in a variety of settings, to a variety of audiences, using a variety of media
C4 Develop a strong sense of intellectual and professional integrity
C5 Think and work creatively, using information and experience as the basis for decision-making
C6 Identify, select, apply and evaluate appropriate scientific and engineering principles, techniques and tools in the development, usage, maintenance and modification of information systems

How Will You Learn?

All taught courses involve lectures, problem-solving coursework and practical sessions. Lectures are used to introduce principles, methods and techniques and, through the use of examples, to illustrate how they can be applied in practice. Coursework allows students to develop their own skills in design and problem-solving and gain extensive practical experience of building computer systems using a wide range of tools and techniques. Practical sessions provide students with the guidance and help required to achieve this. These sessions take the form of programming laboratories, design studios, exercise classes and project consultancy meetings run by academic staff with the assistance of postgraduate students. On all our courses, students mostly 'learn through doing' and can expect to spend far longer in the teaching laboratory than in lectures. Some core units include short essay writing coursework to develop the skills that are vital for effective presentation of project work.
Programme Title: MSci Computer Science

How Will You Be Assessed?

The assessment of the taught course units takes place through a written examination and coursework.

The final year project is examined on the basis of a written report, a formal oral presentation, and a demonstration of the piece of software developed by the student. Students can also put in some business flavour into their final year projects. In addition to the final year project, other modules introduce project and group working skills.

How is the Programme Structured?

Students must complete 120 credits in each development year. Modules are 15 credit each and the Group and Final Year Project (30 credits) in year 3 and 4.

Semester 1
ECS401U Procedural Programming
ECS402U Professional and Research Themes
ECS404U Computer Systems and Networks
ECS407U Logic and Discrete Structures

Semester 2
ECS414U Object Oriented Programming
ECS417U Fundamentals of Web Technology
ECS419U Information Systems Analysis
ECS421U Automata and Formal Languages

ECS422U Skills for Electronic Engineering and Computer Science (runs in sem1/2. Non credit bearing)

Semester 3
ECS505U Software Engineering
ECS509U Probability and Matrices
ECS510U Algorithms and Data Structures in an Object-Oriented Framework
ECS524U Internet Protocols and Applications

Semester 4
ECS506U Software Engineering Project
ECS518U Operating Systems
ECS519U Database Systems
ECS522U Graphical User Interfaces

Semester 5
ECS636U Group Project (30 credits)
Plus three from:
ECS604U Entrepreneurship in Information Technology
ECS607U Data Mining
ECS610U Computer Graphics
ECS612U Interaction Design
ECS640U Big Data Processing
ECS642U Embedded Systems
ECS650U Semi-Structured Data and Advanced Data Modelling
ECS651U Computability, Complexity and Algorithms
Programme Title: MSci Computer Science

Semester 6
ECS636U Group Project (contd)
Plus three from:
ECS608U Distributed Systems and Security
ECS624U C++ for Image Processing
ECS629U Artificial Intelligence
ECS637U Digital Media and Social Networks
ECS639U Web Programming
ECS641U Communicating and Teaching Computing (UAS)
ECS642U Embedded Systems
ECS647U Bayesian Decision and Risk Analysis
ECS652U Compilers

Semester 7
ECS771U Project (30 credits)
Plus three from:
ECS708U Machine Learning
ECS709U Introduction to Computer Vision
ECS712U Design for Human Interaction
ECS713U Functional Programming
ECS715U Program Specifications
IPLM701U Introduction to Law for Science and Engineering

SEMESTER 8
ECS771U Project (Cont)
Plus three from:
ECS727U Real Time and Critical Systems
ECS728U Business Technology Strategy
ECS733U Interactive Systems Design
ECS734U Techniques for Computer Vision
ECS735U The Semantic Web
ECS736U Information Retrieval
ECS737U Software Analysis and Verification
IPLM702U Foundations of Intellectual Property Law and Management

Progression Criteria
To progress from one developmental year to the next, a student must meet any
programme and pathway requirements and take and pass modules as detailed
below. There shall also be an approved threshold requirement, specifying an average
mark higher than the pass mark that is required to progress to the next year of the
integrated masters. This mark shall be set as standard at a minimum of 50.0.
Individual programme regulations may specify higher thresholds, and/or that the
threshold mark should be calculated across multiple developmental years.

i. foundation year to developmental year one: take modules to the value of 120 credits,
and pass modules to the value of 90 credits;

ii. developmental year one to developmental year two: take modules to the value of 120
credits, and pass modules (excluding modules at Level 3) to the value of 105 credits
from developmental year one;

iii. developmental year two to developmental year three: take modules to the value of
120 credits, and pass modules (excluding modules at Level 3) to the value of 210
credits from developmental years one and two;

iv. developmental year three to developmental year four:
Take modules to the value of 120 credits, pass modules (excluding
modules at Level 3) to the value of 300 credits from developmental years one,
two, and three, and meet any approved threshold requirement that specifies a
higher average level achievement than the pass mark;

What Are the Entry Requirements?

A/AS-levels
Tariff/Grades requirement: AAB(340 points) GCSE Maths grade B or above.

Vocational or applied A-levels
Acceptability: Accepted and subject to the above tariff requirements for A/AS-levels. Must be in related subject, ICT/Computing.

BTEC Extended Diploma
Pass with D*D*D* in ICT/Computing with grade B GCSE Maths.

BTEC Diploma (120 Credit)
Pass with D*D* in ICT/Computing with grade B in A-level Maths or ICT.

BTEC Subsidiary Diploma (60 Credit)
Pass with D*. These qualifications are acceptable ONLY if offered with two appropriate A-levels ie Maths/ICT grade B.

HNC
First year entry only. 120 credits at level 4. Must be distinction overall.

HND
2nd year may be possible. 240 credits at level 5. Pass HND with distinction overall.

Access
Pass with 45 credits in Access in Computing at level 3, of which 30 credits must be Distinction and 15 credits at Merit or Higher. An additional entry maths test will be required if you do not hold GCSE Mathematics.

International Baccalaureate
Acceptability: Acceptable on its own and combined with other qualifications. Subjects and grades required: 34 points overall. Must include either HL English grade 4 or SL English grade 4 or above.

IELTS 6.0 (5.5 in all components)

How Do We Listen and Act on Your Feedback?

The Staff-Student Liaison Committee provides a formal means of communication and discussion between Schools and its students. The committee consists of student representatives from each year in the school/institute together with appropriate representation from staff within the school/institute. It is designed to respond to the needs of students, as well as act as a forum for discussing programme and module developments. Staff-Student Liaison Committees meet regularly throughout the year.

Each school operates a Learning and Teaching Committee, or equivalent, which advises the School/Institute Director of Taught Programmes on all matters relating to the delivery of taught programmes at school level including monitoring the application of relevant QM policies and reviewing all proposals for module and programme approval and amendment before submission to Taught Programmes Board. Student views are incorporated in this Committee’s work in a number of ways, such as through student membership, or consideration of student surveys.
Programme Title: MSci Computer Science

All schools operate an Annual Programme Review of their taught undergraduate and postgraduate provision. The process is normally organised at a School-level basis with the Head of School, or equivalent, responsible for the completion of the school's Annual Programme Reviews. Schools/institutes are required to produce a separate Annual Programme Review for undergraduate programmes and for postgraduate taught programmes using the relevant Undergraduate or Postgraduate Annual Programme Review pro-forma. Students' views are considered in this process through analysis of the NSS and module evaluations.

Academic Support

Each student is allocated a personal adviser in their first year and the adviser remains with them until they complete their programme.

Programme-specific Rules and Facts

N/A

Specific Support for Disabled Students

Queen Mary has a central Disability and Dyslexia Service (DDS) that offers support for all students with disabilities, specific learning difficulties and mental health issues. The DDS supports all Queen Mary students: full-time, part-time, undergraduate, postgraduate, UK and international at all campuses and all sites.

Students can access advice, guidance and support in the following areas:

• Finding out if you have a specific learning difficulty like dyslexia
• Applying for funding through the Disabled Students’ Allowance (DSA)
• Arranging DSA assessments of need
• Special arrangements in examinations
• Accessing loaned equipment (e.g. digital recorders)
• Specialist one-to-one "study skills" tuition
• Ensuring access to course materials in alternative formats (e.g. Braille)
• Providing educational support workers (e.g. note-takers, readers, library assistants)
• Mentoring support for students with mental health issues and conditions on the autistic spectrum.

Links With Employers, Placement Opportunities and Transferable Skills

The School of Electronic Engineering & Computer Science has a wide range of industrial contacts secured through research projects and consultancy, our Industrial Experience programme and our Industry Panel.

The Industry Panel works to ensure that our courses are state of the art and match the changing requirements of this fast moving industry. The Panel includes representatives from a variety of Computer Science oriented companies ranging from SMEs to major blue-chips. These include: Microsoft Research, Royal Bank of Scotland, BT Labs, Oaklodge Consultancy, Intel Research, The Usability Company, Hewlett Packard Labs and Arclight Media Technology Limited.

Recent graduates have found employment as programmers, Systems Analysts, Software Engineers, database developers, IT consultants and web developers with well known multinational companies throughout the UK and Europe, the Americas and
Programme Title: MSci Computer Science

Merril Lynch, Microsoft, Nokia, Barclays Capital, Logica, JPMorgan and Bear Sterns are among the organizations that have recently employed graduates of EECS programs.

Career Opportunities

Graduates can enter many different disciplines and vocations such as banking, mobile phone companies, the NHS, newspapers, schools, IT consultancies and financial consultancies.

A significant proportion of graduates obtain jobs in the software industry - as systems analysts, programmers, database managers or working in e-commerce - in a variety of companies. Others find employment in jobs that make use of their communication and analysis skills such as management consultancy.
