Programme Title: MSc in Biomaterials

Programme Specification

Awarding Body/Institution: Queen Mary, University of London
Teaching Institution: Queen Mary, University of London
Name of Final Award and Programme Title: MSc in Biomaterials
Name of Interim Award(s): 
Duration of Study / Period of Registration: 1 calendar year
QM Programme Code / UCAS Code(s): J5S5
QAA Benchmark Group: Masters degrees
FHEQ Level of Award: Level 7
Programme Accredited by: Institution of Materials, Minerals and Minding, on behalf of the Engineering Council
Date Programme Specification Approved: 12 Apr 2017
Responsible School / Institute: School of Engineering and Materials Science

Schools which will also be involved in teaching part of the programme

Institution(s) other than Queen Mary that will provide some teaching for the programme

Programme Outline

This MSc programme covers both theoretical and applied knowledge of biomaterials. Technological advances, as well as methodological issues, biomaterials and their functions are covered in detail. The programme will provide an insight into areas of material science, biocompatibility, ethical issues, nanomaterials, and biological systems. The programme is multidisciplinary in nature and involves a combination of theoretical and practical approaches covered during the three semesters.

In the first Semester, special emphasis is placed on materials – structure property correlations in the context of materials used in medicine (biomaterials) and how the field of medical materials have made enormous impact on the repair and replacement of injured and diseased part of the human body. Courses, such as Materials Selection and Design Advanced Structure-Property Relationships in Materials, Advanced Tissue Engineering and Regenerative Medicine, and Nanotechnology and Nanomedicine are offered which provides a detailed insight into the theoretical aspects of the biomaterials in general. A module on research methods and experimental techniques in engineering provides training in transferrable skills.

In the second semester, the theoretical aspects covered in the first semester are reinforced by applications of Biomaterials in medicine. In addition, courses on bioactivity, biocompatibility, implant design and technology, tissue mechanics, chemical and biological sensors and advanced materials characterisation techniques are discussed in detail. Optional course on law for science and engineering and intellectual property law are also on offer. The taught courses are complemented by research projects that are based on both the student's and staff's research interests.
Programme Title: MSc in Biomaterials

There is scope within the programme to study optional modules and to prescribe additional modules that can be matched to gaps in a given student's background. For example, students without a qualification in Materials, Minerals and Mining will be asked to select Materials rich modules such as MTRM065 Advanced Structure-Property Relationships in Materials, MTRM011 Materials Selection in Design, or MTRM803 Nanotechnology and Nanomedicine in semester A and MTRM066 Advanced Materials Characterization Techniques, MTRM797 Advanced Polymer Synthesis, or MTRM312 Science of Biocompatibility in semester B.

The taught courses are complemented by research projects that run through all three semesters and are based on both the student's and staff's research interests.

The research project will teach students to organise their research, compare and appraise the viability of results for a given project, demonstrate the various functions and skills required of a professional, graduate scientist in the industrial and academic environment and illustrate the experimental procedure for challenging problems.

Aims of the Programme

The overall aims of the programme are:
• to provide a materials education of a standard recognised to be amongst the highest in UK institutions
• to take a multi-disciplinary approach to the elements of materials science and engineering, including design
• to educate our students in the scientific and mathematical principles underpinning materials science
• to enable all our students to achieve their academic potential by providing a stimulating, friendly and supportive environment
• to offer challenging programmes which provide our graduates with a clear pathway to Chartered Engineering status
• to prepare our graduates with discipline-specific knowledge and transferable skills that will equip them for employment and continued professional development through self-learning.

Specific aims include:
• analytical, creative, organisational, practical and communication skills,
• problem-recognition and solving abilities
• competence in discipline-specific topics which contribute to the solution of problems applied to materials science
• an appreciation of how theoretical and practical approaches can be synthesized to arrive at optimal solutions
• an appreciation of the financial context of the development of new materials and products
• an understanding of the relationship between their discipline and social, economic and environmental issues and constraints
• an appreciation of the relative merits of a proposed solution,
• the detailed skills needed to undertake a research, development or design project in depth, understanding the technical, financial and time limitations.

This programme aspires to produce the type of highly skilled, motivated, creative and team-work oriented graduates which the related industry needs.

What Will You Be Expected to Achieve?

Acquire contemporary factual knowledge in the area of Biomaterials incorporating fundamental principles of Materials Science and Engineering and develop the ability to apply this knowledge in cutting edge research in Biomaterials in a multidisciplinary context.

Academic Content:

| A1 | Have acquired a body of contemporary factual knowledge incorporating the fundamentals of Biomaterials and, as appropriate, recognize the application of this to Materials Science and Medicine |
| A2 | Have acquired sufficient knowledge of fundamentals of Biomaterials Science principles as applied to realistic materials and clinical applications |
| A3 | Have an understanding of the fundamental physical concepts of core technologies so that the limitation of the experimental, mathematical and computational techniques available are fully recognized |
Programme Title:  MSc in Biomaterials

A4 Have acquired an understanding of the multidisciplinary nature of modern Biomaterials Research and the diversity of research areas that Materials Science has an impact on.

Disciplinary Skills - able to:

B1 Demonstrate sufficient fundamental scientific and engineering principles to be able to work with biomaterials science related problems and projects
B2 Appreciate the wider multidisciplinary scientific and engineering context of Biomaterials Research and its underlying principles
B3 Appreciate the social, environmental, ethical economic and commercial considerations affecting their engineering judgement
B4 The ability to carry out research in a multidisciplinary environment and to collaborate effectively with scientists and engineers from diverse backgrounds.

Attributes:

C1 Have the ability to analyse and solve problems individually and in groups
C2 Have the ability to communicate knowledge and ideas verbally and in written reports
C3 Apply scientific principles to a range of materials related applications
C4 Understand both the application and limitation of mathematical, computational and experimental techniques available to an engineer
C5 Have the ability to acquire a working knowledge of new experimental and/or computational techniques used in Biomaterials Research within a short space of time.

How Will You Learn?

Through a wide range of different interactions including lectures, tutorials, laboratory classes, exercise classes and project supervisions. It is expected that the programme will demand between 1800 and 2000 hours in total to complete. About 10% of this time will be in scheduled lectures. A significant amount of independent personal study is anticipated as part of this degree.

How Will You Be Assessed?

The taught modules will be assessed through both coursework and examinations. The details are as outlined in the individual module specifications. The examinations will take place in the standard college examination period in May for taught modules taken in SEMS. The final project thesis will be assessed in September and the student will also complete a presentation as well as an oral examination.
How is the Programme Structured?

The Biomaterials MSc is a 12 months programme at QMUL accredited by the Institute of Materials, Minerals and Mining, which allows students to progress to chartered engineer status (CEng). In semesters A and B you will study 2 compulsory and 5 optional modules. The compulsory modules include a course on research methods, which is designed to give you a range of transferable skills such as thesis writing and critical analysis of the literature, and a modules on chemical and biological sensors. The optional modules cover a wide range of contemporary topics in Materials and Biomaterials Research providing you with the opportunity to tailor the programme to your individual needs and interest. The research project will run through all three semesters. you will become a member of one of the research groups in our School and work on our project alongside the PhD students and postdoctoral researchers in your group.

**What Are the Entry Requirements?**

The entry requirement is that the student to have secured at least a high 2ii (>55%) BEng degree or equivalent qualification in engineering, science or an equivalent academic programme and supporting references. A minimum of IELTS 6.5 or equivalent is required for non-native English speakers.

**How Do We Listen and Act on Your Feedback?**

The Staff-Student Liaison Committee provides a formal means of communication and discussion between schools/institutes and its students. The committee consists of student representatives from each year in the school/institute together with appropriate representation from staff within the school/institute. It is designed to respond to the needs of students, as well as act as a forum for discussing programme and module developments. Staff-Student Liaison Committees meet regularly throughout the year.

Each school/institute operates a Learning and Teaching Committee, or equivalent, which advises the School/Institute Director of Taught Programmes on all matters relating to the delivery of taught programmes at school level including monitoring the application of relevant QM policies and reviewing all proposals for module and programme approval and amendment before submission to Taught Programmes Board. Student views are incorporated in the committee’s work in a number of ways, such as through student membership, or consideration of student surveys.

All schools/institutes operate an Annual Programme Review of their taught undergraduate and postgraduate provision. APR is a continuous process of reflection and action planning which is owned by those responsible for programme delivery; the main document of reference for this process is the Taught Programmes Action Plan (TPAP) which is the summary of the school/institute’s work throughout the year to monitor academic standards and to improve the student experience. Students’ views are considered in this process through analysis of the PTES and module evaluations.

**Academic Support**

During induction the students will be welcomed to the college by the programme leader. Early on in the programme the students will select a project supervisor based upon a wide choice of different project areas. This academic will then also act as a personal tutor. Many of the modules are taught to small classes and so a high level of personal support will also be available from the course coordinators in the majority of the taught modules.

**Programme-specific Rules and Facts**

The programme follows the standard QMUL guidelines for MSc delivery.
Specific Support for Disabled Students

Queen Mary has a central Disability and Dyslexia Service (DDS) that offers support for all students with disabilities, specific learning difficulties and mental health issues. The DDS supports all Queen Mary students: full-time, part-time, undergraduate, postgraduate, UK and international at all campuses and all sites.

Students can access advice, guidance and support in the following areas:
- Finding out if you have a specific learning difficulty like dyslexia
- Applying for funding through the Disabled Students’ Allowance (DSA)
- Arranging DSA assessments of need
- Special arrangements in examinations
- Accessing loaned equipment (e.g. digital recorders)
- Specialist one-to-one "study skills” tuition
- Ensuring access to course materials in alternative formats (e.g. Braille)
- Providing educational support workers (e.g. note-takers, readers, library assistants)
- Mentoring support for students with mental health issues and conditions on the autistic spectrum.

Links With Employers, Placement Opportunities and Transferable Skills

The school has an active Industrial Liaison forum (ILF). This forum has a direct impact on our programmes by encouraging employers to sponsor and support both the students and to provide real design case studies to engage the students throughout the curriculum.

The ILF meets twice a year. The event in October runs in parallel with the SEMS prize day where prospective employers attend the event, meet MSc and final year undergraduate students discussing opportunities and tips for applications. The new MSc students are encouraged to attend the October event to discuss their projects with industry to forge further ties, where our industrial liaison partners are regularly involved in some of the projects that are of applied research nature. The second industrial forum day takes place in March, where the MSc students are encouraged to meet industrial representatives to discuss potential future employment.
