Programme Title: MSci Mathematics with Statistics; Msci Mathematics with Statistics with Year Abroad;

Programme Specification (UG)

Awarding body / institution: Queen Mary University of London
Teaching institution: Queen Mary University of London
Name of final award and programme title: MSci Mathematics with Statistics
MSci Mathematics with Statistics with Year Abroad
Name of interim award(s): CertHE, DipHE
Duration of study / period of registration: 4/5 years
QMUL programme code / UCAS code(s): UMIF-QMMATH1-UMMASSTA/G1G3; UMIF-QMMATG1-UJMAASTY/GG1Y
QAA Benchmark Group: Mathematics, statistics and operational research
FHEQ Level of Award: Level 6
Programme accredited by: Royal Statistical Society
Date Programme Specification approved: 
Responsible School / Institute: School of Mathematical Sciences

Schools / Institutes which will also be involved in teaching part of the programme:

Institution(s) other than QMUL that will provide some teaching for the programme:

Programme outline

This programme combines training to an advanced level in rigorous mathematics, probability and statistical theory with analysis of data using statistical computing packages. Graduates from the programme are well-placed to embark on further research in mathematics and/or statistics leading to a PhD, or to undertake employment requiring advanced mathematical and statistical skills. These jobs are in diverse areas such as finance, government, industry, and teaching.

Aims of the programme

This programme is an extension of GG31 (BSc Mathematics and Statistics). It aims to build statistical theory and methodology on mathematical foundations, especially probability theory. It aims to produce graduates who can apply probabilistic modelling to areas such as genetics, quantum physics and risk analysis, and increasingly in the financial sector. Applications of probability and
statistics are included, notably design of experiments, time series and financial mathematics. If students are interested in specialising in statistical theory or statistical applications, such as finance, the wide range of modules available provides the opportunity. This programme include a final year consisting of a 30-credit project and modules from the School of Mathematical Sciences’ MSc programmes. This enables graduates to become independent learners of advanced mathematics and statistics.

What will you be expected to achieve?

Students who successfully complete this programme will be able to:

QMUL Model

The QMUL Model is an innovative teaching and learning initiative that will broaden opportunities for Queen Mary undergraduates within and beyond higher education, supporting them to plan and manage their ongoing professional development. The Model is firmly grounded in the core QMUL values of respect for, and engagement with, the local area and communities, with a distinctive focus on enabling students to make a positive societal impact through leadership in their chosen field. The Model is organised around the key themes of:

- networking
- multi- and inter-disciplinarity
- international perspectives
- enterprising perspectives.

Students are required to study QMUL Model modules to the value of at least 10 credits at each year of undergraduate study. Model modules may be 5, 10 or 15 credits. Model modules are indicated within this programme specification.

In your first year of study, the Model module will be core or compulsory and will be situated within your home School or Institute. In subsequent years, students will be strongly encouraged to study at least one Model module beyond their home discipline(s), which could, for example, be in another School / Institute or area of QMUL or undertaken as a module outside of QMUL.

If Model module information is not provided on this programme specification for all subsequent years of study, this will be identified as your studies continue.

Where a Model module elective can be selected from an approved group of Model modules, no guarantee can be provided that your first choice of Model module will be available.
Programme Title: MSci Mathematics with Statistics; MSci Mathematics with Statistics with Year Abroad;

<table>
<thead>
<tr>
<th>A1</th>
<th>reason clearly, critically and with rigour within an advanced mathematical and statistical context, both theoretical and practical;</th>
</tr>
</thead>
<tbody>
<tr>
<td>A2</td>
<td>choose appropriate mathematical and statistical methods and understand how to apply them in practical situations;</td>
</tr>
<tr>
<td>A3</td>
<td>verify that there is no obvious mismatch between the data, the real situation and the conclusions of the analysis;</td>
</tr>
<tr>
<td>A4</td>
<td>understand and use mathematics at graduate level such as algebra, topology, group theory, dynamical systems, measure theory, probability and stochastic processes, as well as applied statistics;</td>
</tr>
</tbody>
</table>

Disciplinary Skills - able to:

<table>
<thead>
<tr>
<th>B1</th>
<th>be fluent and accurate in basic numerical skills;</th>
</tr>
</thead>
<tbody>
<tr>
<td>B2</td>
<td>comprehend fundamental concepts and techniques of calculus, linear and abstract algebra, probability theory, statistical inference, linear models and other mathematical and statistical subjects;</td>
</tr>
<tr>
<td>B3</td>
<td>take and write up notes, plan revision, learn independently, manage time and work cooperatively with fellow students;</td>
</tr>
<tr>
<td>B4</td>
<td>use e-mail for cooperation and the internet as a source of information, and have a sense of right and wrong ways of using these facilities;</td>
</tr>
<tr>
<td>B5</td>
<td>explain the interrelations among mathematical subjects and how to use them in statistics, analyse a problem within a mathematical or statistical context and select appropriate mathematical or statistical tools to solve it;</td>
</tr>
<tr>
<td>B6</td>
<td>explain mathematical work, in appropriate detail, both to specialists and non-specialists, and discuss statistical aspects of a practical problem presented by a scientist;</td>
</tr>
<tr>
<td>B7</td>
<td>construct appropriate written mathematical or statistical arguments, tackle a substantial practical statistical problem independently, for example design an experiment involving statistical modelling and data analysis, and complete an advanced mathematical and/or statistical project;</td>
</tr>
<tr>
<td>B8</td>
<td>use statistical computer packages and interpret their output critically;</td>
</tr>
</tbody>
</table>

Attributes:

<table>

G3

How will you learn?

Teaching in most modules is primarily by formal lectures but may include guided reading. For all except some higher-level
modules, teaching is supported by tutorial classes and/or computer laboratories. Teaching of reading and project modules is
primarily by guided reading and weekly seminars or supervisions.
Learning in most modules is by attending lectures, reading lecture notes and recommended text books, attempting exercises and asking questions in tutorial classes and/or computer laboratories and staff office hours.

How will you be assessed?

Assessment is normally primarily by written examination but for some modules may also include continuous assessment of coursework consisting of solutions to exercises, which are set weekly or fortnightly, and/or one or more tests. Summative coursework assessment or tests may typically contribute up to 10% of the assessment. Assessment of project modules is normally by a project report, presentation and, at the examiners' discretion, an oral examination.

How is the programme structured?

Please specify the full time and part time programme diets (if applicable). Please also outline the QMUL Model arrangements for each year of study. The description should be sufficiently detailed to fully define the structure of the diet.

IAll first-year Mathematical Sciences students must take and pass MTH3100 Essential Mathematical Skills in order to progress to the second year of a Mathematical Sciences degree programme.

Year 1
MTH3100 [3] Essential Mathematical Skills (0 Credit Core module)
8 compulsory level 4 modules
MTH4200 [4] Calculus I
MTH4114 [4] Computing and Data Analysis with Excel
MTH4213 [4] Numbers, Sets and Functions
MTH4207 [4] Introduction to Probability
MTH4201 [4] Calculus II
MTH42XX (should be the MTH42 version of the new module) Vectors and Matrices (renamed from MTH4203 [4] Geometry I)
MTH42XX (should be the MTH42 version of the new module) Probability and Statistics I (renamed from MTH4206 [4] Introduction to Statistics).

Year 2
Semester A
Three compulsory modules
MTH5104 [5] Convergence and Continuity
MTH5112 [5] Linear Algebra I
Probability and Statistics II (renamed from MTH5122 Statistical Methods)

Choose one from:
MTH5XXX [5] Professional Skills and Data Analysis with SAS (QMmodel)

Semester B
One compulsory module
MTH5120 [5] Statistical Modelling I
Choose three from:
MTH5103 [5] Complex Variables
MTH5XXX [5] Introduction to Differential Geometry
MTH5105 [5] Differential and Integral Analysis
MTH5126 [5] Statistics for Insurance
Programme Title: MSci Mathematics with Statistics; Msci Mathematics with Statistics with Year Abroad;

<table>

</tbody>
</table>

[Remark: Students on this programme cannot take a Year 2 QM Model Module outside the school. We expect that to be possible in Year 3]

Year 3
Three compulsory modules
MTH6134 [6] Statistical Modelling II

Choose three from:
MTH6104 [6] Algebraic Structures II
MTH6107 [6] Chaos and Fractals
MTH6109 [6] Combinatorics
MTH6115 [6] Cryptography
MTH6132 [6] Relativity
MTH6138 [6] Third Year Project (or Semester 6)
MTH6140 [6] Linear Algebra II
MTH6108 [6] Coding Theory
MTH6128 [6] Number Theory
MTH6142 [6] Complex Networks

Choose a further 30 credits of level 5 or 6 modules.

Year 4
MTH717U [7] MSci Project (30 credits, double module over both semesters)
MTH700U [7] Research Methods in Mathematical Sciences

Choose two modules from:
MTH709U [7] Bayesian Statistics
MTH731U [7] Computational Statistics

Choose 15 credits from undergraduate MTH or SPA modules at level 7, and another 30 credits at level 7.

What are the entry requirements?
Our normal entry requirement is three GCE A-levels at grade A including Mathematics, or equivalent. Applicants also need at least grade C or 4 in GCSE English Language, or equivalent.

How will the quality of the programme be managed and enhanced?
The programme is overseen by a Programme Director with overall oversight of the programme.

The quality of individual modules is monitored by DOTP and DUGS, and includes evaluation of student feedback through questionnaires, the Student Staff Liaison Committee, module registrations, exam performance, as well as direct observations of the lectures.

The quality and structure of the programme as a whole is the responsibility of the DoTP with support from DUGS, the Programme Director and the School's Teaching and Learning Committee. This includes revising the syllabuses of modules, and refining the module offering.

How do we listen to and act on your feedback?
The Student-Staff Liaison Committee (SSLC) provides a formal means of communication and discussion between the School and its students. The committee consists of student representatives from each year in the School together with appropriate representation from staff within the School. It is designed to respond to the needs of students, as well as act as a forum for discussing programme and module developments. The Student-Staff Liaison Committee meets regularly throughout the year.

The School operates a Teaching and Learning Committee, which advises the School Director of Taught Programmes on all matters relating to the delivery of taught programmes at School level including monitoring the application of relevant QMUL policies and reviewing all proposals for module and programme approval and amendment before submission to Taught Programmes Board. Student views are incorporated in this Committee’s work in a number of ways, such as through the SSLC and consideration of student surveys.

The School operates an Annual Programme Review of all its taught provision. The process is organised at a School-level basis with the Director of Taught Programmes responsible for updating the School’s Taught Programmes Action Plan. Students’ views are considered in this process through analysis of student surveys and module evaluations.

What academic support is available?
Each student is allocated a personal academic adviser, who acts as a first point of contact for general academic and pastoral support. Personal tuition is provided primarily through tutorial classes and visits to module organisers during their office hours, which are advertised on the web. Programme induction for new students begins during the enrolment period and extends into the first semester; it includes a series of presentations organised by the Student Support Officer. Each programme is assigned a
Programme Title: MSci Mathematics with Statistics; Msci Mathematics with Statistics with Year Abroad;

Programme Director and all teaching is overseen by the Teaching and Learning Committee, which includes the Programme Directors and is chaired by the Director of Taught Programmes. Programmes are monitored continuously and reviewed every few years by the Teaching and Learning Committee.

Programme-specific rules and facts

All first-year Mathematical Sciences students must pass Essential Mathematical Skills in order to progress to the second year of a Mathematical Sciences degree programme. At the end of year two, students have the opportunity to take a placement year in industry - G100 Mathematics with Professional Placement. Students also have the option to take advantage of studying abroad - G100 Mathematics with Year Abroad.

Specific support for disabled students

Queen Mary has a central Disability and Dyslexia Service (DDS) that offers support for all students with disabilities, specific learning difficulties and mental health issues. The DDS supports all Queen Mary students: full-time, part-time, undergraduate, postgraduate, UK and international at all campuses and all sites.

Students can access advice, guidance and support in the following areas:
• finding out if you have a specific learning difficulty like dyslexia;
• applying for funding through the Disabled Students' Allowance (DSA);
• arranging DSA assessments of need;
• special arrangements in examinations;
• accessing loaned equipment (e.g. digital recorders);
• specialist one-to-one "study skills" tuition;
• ensuring access to course materials in alternative formats (e.g. Braille);
• providing educational support workers (e.g. note-takers, readers, library assistants);
• mentoring support for students with mental health issues and conditions on the autistic spectrum.

Links with employers, placement opportunities and transferable skills

Recent graduates have gone into a wide variety of jobs. Some went into positions in the financial sector ranging from actuarial and accountancy trainees with banks such as Lloyds TSB to a financial analyst with AIG. Teacher training was an option that was taken up by a number of our graduates, as was further study: around one third of our graduates go on to complete a Masters or PhD degree. High-level numeracy is one of the most sought-after skills in the workplace and many opportunities are open to a mathematical sciences graduate. During this degree programme students learn how to analyse and solve problems, apply mathematical modelling, communicate their ideas and theories effectively, and work independently and manage their own time. Students learn to apply mathematical techniques to situations across the sciences and other areas such as finance. These skills are highly desirable to employers ranging from business and finance to the chemicals and materials industries.

Programme Specification Approval

Person completing Programme Specification: Dr Mark Walters, DoTP

Person responsible for management of programme: Dr Lawrence Pettit

Date Programme Specification produced / amended by School / Institute Learning and Teaching Committee: 7 Feb 2018
Programme Title: MSci Mathematics with Statistics; Msci Mathematics with Statistics with Year Abroad;

Date Programme Specification approved by Taught Programmes Board:
